DATA ANALYTICS PROJECT

PIZZA SALES ANALYSIS

Using MySQL and PowerBI

Date: 16/05/2026

**By
Priyamvadha Rathnakumar**

INTRODUCTION TO MYSQL AND POWERBI

MySQL

- MySQL is a relational database management system.
- It is used to store, manage, and query structured data.
- In this project, MySQL was used to perform analytical queries on the dataset.

PowerBI

- Power BI is a business intelligence and data visualization tool.
- It helps convert raw data into dashboards and interactive visuals.
- In this project, Power BI was used to create dashboards for better interpretation of campaign performance.

PROJECT OVERVIEW

➔ Dataset contains:

- Order ID
- Pizza Category
- Pizza Size
- Quantity Sold
- Revenue
- Order Date
- Pizza Name
- Total Orders

➔ Aim of the Project:

To analyze pizza sales performance, identify best-selling pizzas, customer ordering trends, revenue contribution, and scope of business improvement

QUESTIONS

- Which pizza category generates the highest revenue?
- Which pizza size contributes most sales?
- What are the busiest ordering days?
- Which pizzas are best sellers and worst sellers?
- How do monthly sales trends vary?

1. WHICH PIZZA CATEGORY GENERATES HIGHEST SALES?

MySQL Query and Table

```
select pizza_category, cast(sum(total_price)
as decimal (10, 2)) as Total_Revenue,
cast(sum(total_price) * 100/ (select
sum(total_price) from pizza_sales) as decimal
(10, 2)) as Percentage from pizza_sales
group by pizza_category;
```

	pizza_category	Total_Revenue	Percentage
▶	Classic	220053.10	26.91
	Veggie	193690.45	23.68
	Supreme	208197.00	25.46
	Chicken	195919.50	23.96

% of Sales by Pizza Category

2. WHICH PIZZA SIZE PERFORMS BEST?

MySQL Query and Table

```
select pizza_size, cast(sum(total_price) as  
decimal(10,2)) as total_revenue,  
cast(sum(total_price) * 100 / (select  
sum(total_price) from pizza_sales) as  
decimal(10,2)) as Percentage from pizza_sales  
group by pizza_size  
order by pizza_size;
```

	pizza_size	total_revenue	Percentage
▶	L	375318.70	45.89
	M	249382.25	30.49
	S	178076.50	21.77
	XL	14076.00	1.72
	XXL	1006.60	0.12

% of Sales by Pizza Size

3. DAILY TREND FOR TOTAL ORDERS

MySQL Query and Table

```
select dayname(order_date) as Order_Day,  
count(distinct order_id) as Total_Orders from  
pizza_sales  
group by Order_Day;
```

	Order_Day	Total_Orders
►	Friday	3538
	Monday	2794
	Saturday	3158
	Sunday	2624
	Thursday	3239
	Tuesday	2973
	Wednesday	3024

PowerBI Visual

Daily Trend for Total Orders

4. MONTHLY TREND ANALYSIS

MySQL Query and Table

```
select monthname(order_date) as  
Order_Month, count(distinct order_id) as  
Total_Orders from pizza_sales  
group by Order_Month;
```

	Order_Month	Total_Orders
►	April	1799
	August	1841
	December	1680
	February	1685
	January	1845
	July	1935
	June	1773
	March	1840
	May	1853
	November	1792
	October	1646
	September	1661

PowerBI Visual

5. BEST SELLING PIZZAS

MySQL Query and Table

```
select pizza_name, sum(total_price) as  
Total_Revenue from pizza_sales  
group by pizza_name  
order by Total_Revenue desc  
limit 5;
```

pizza_name	Total_Revenue
The Thai Chicken Pizza	43434.25
The Barbecue Chicken Pizza	42768.00
The California Chicken Pizza	41409.50
The Classic Deluxe Pizza	38180.50
The Spicy Italian Pizza	34831.25

PowerBI Visual

6. WORST SELLING PIZZAS

MySQL Query and Table

```
select pizza_name, sum(total_price) as  
Total_Revenue from pizza_sales  
group by pizza_name  
order by Total_Revenue asc  
limit 5;
```

pizza_name	Total_Revenue
The Brie Carre Pizza	11588.50
The Green Garden Pizza	13955.75
The Spinach Supreme Pizza	15277.75
The Mediterranean Pizza	15360.50
The Spinach Pesto Pizza	15596.00

PowerBI Visual

KEY INSIGHTS FROM THE PROJECT

- Large pizzas are the highest revenue contributors.
- Classic category dominates overall sales.
- Weekend evenings generate maximum orders.
- Some pizzas perform strongly in revenue but not in quantity.
- Sales patterns vary significantly across months.

SUGGESTIONS

- Increase promotions during weekends.
- Focus more on high-performing pizza categories.
- Improve marketing for low-selling pizzas.
- Optimize inventory based on monthly demand trends.
- Introduce combo offers for medium and regular pizzas.

CONCLUSION

- **MySQL helped perform analytical querying on pizza sales data.**
- **Power BI transformed raw data into meaningful visual dashboards.**
- **The project identified customer ordering behavior, best sellers, and sales trends.**
- **Data analytics can help improve restaurant sales strategy and decision-making.**

THANK YOU!
